Plugin Requirement:	2
Installation Steps:	2
Connection settings:	3
General Settings:	7
Prepare for sync:	12
Manual functions:	12
Synced status:	14
Log settings:	15

Introduction

WooCommerce Visma Integration (WooVisma) is a link between WooCommerce and Visma accounting system. WooVisma is a complete easy-to-use integration to synchronize your WooCommerce orders, customers and products to your Visma account. Choose to create an order or convert the order to an invoice. When a new customer purchase a product and goes through the registration and checkout process, all his customer data and order will instantly be synced to Visma. If any of his details are changed later on by himself or by admin, it will also instantly be updated in Visma.

The ORDER/INVOICE and PRODUCT sync features require a license purchase from <http://onlineforce.net> WooCommerce Visma integration plugin connects to license server hosted at <http://onlineforce.net> to check the validity of the license key you type in the settings page.

Plugin Requirement

1. PHP version : 5.3 or Higher, Tested upto 5.5.X
2. WordPress : WordPress 3.8 or higher, tested upto 4.7.3
3. This plugin requires the WooCommerce plugin

Installation Steps

1. Install WooVisma plugin either via the WordPress.org plugin directory, or by uploading the files to your server.
2. Activate the plugin in your WordPress admin dashboard and goto the admin panel Dashboard -> WooVisma.

- Finally, click the test button to confirm your settings. You should see **Your Integration works fine** message. If the test fails, then please check your Settings.

The screenshot shows a settings interface with a navigation bar at the top containing tabs for 'Connection Settings', 'General Settings', 'Manual Functions', 'Synced Status', and 'Log Settings'. Below the navigation bar, a green message bar displays 'Your Integration Works Fine'. The main content area is divided into three sections: 'Visma Access Settings', 'License key', and 'Test Connection'. The 'Visma Access Settings' section includes radio buttons for 'Https/Http' (with 'HTTPS' selected), and input fields for 'Client ID', 'Client Secret', and 'Registered URI'. Below these fields are 'Save' and 'Authenticate' buttons. The 'License key' section has an input field and a 'Save' button, with a note: '(This is the License key you received from us by mail.)'. The 'Test Connection' section features a 'Test' button.

General Settings

1. Here you can enable automatic sync by choosing the Enabled option from automatic sync dropdown under Sync settings.

- Automatic Sync For Product - If product is created in woocommerce, it will be automatically synced with Visma account.
- Automatic Sync For Customer - If customer is created in woocommerce, it will be automatically synced with Visma account.
- Automatic Sync For Order - If order is created in woocommerce, it will be automatically synced with Visma account.

8. If you want to specify different tax for a particular product, Goto product and click edit, here you can see "Visma Product Tax Rate" Dropdown on top right corner.

Prepare for sync

For the sync to take place properly, all necessary attributes needs to be set. This applies for the manual sync as well as for the automatic sync. Here are the check lists:

Product Sync: All main products and variable products must have a valid and unique SKU (varunummar). If valid SKU is missing, the product id is considered as SKU.

Customer Sync: All customers must have a unique email address. Customers a mapped with their email addresses. Beside that all customer's needs to have a Billing details filled in.

Order/Invoice Sync: Products and Customers must be synced before order/Invoice can be synced.
