

Create API key

API key for connecting Airmee app with Unifaun

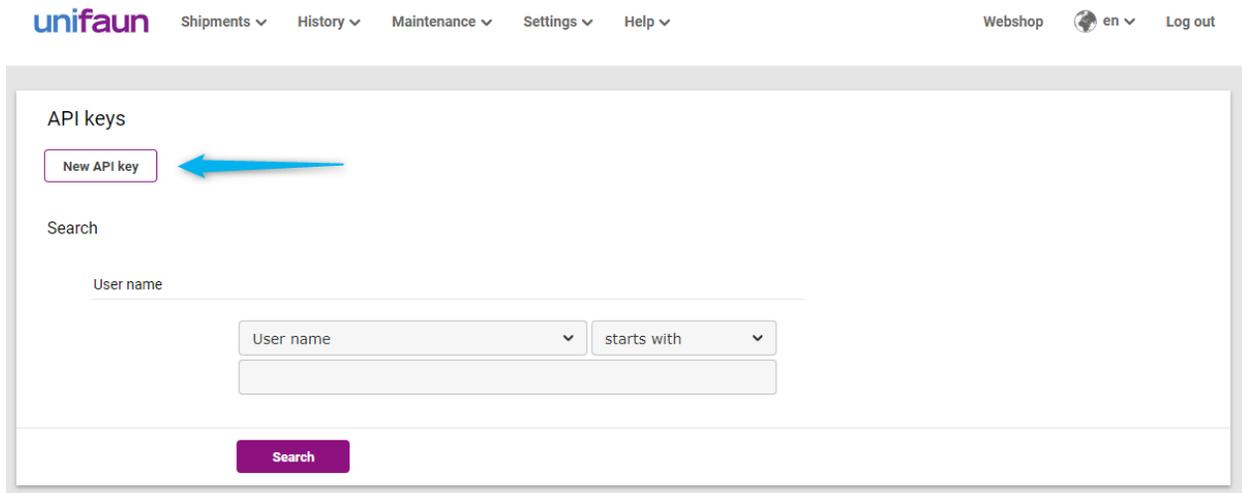

The screenshot shows the Airmee dashboard interface. On the left is a navigation sidebar with options like Home, Orders, Products, Customers, Analytics, Marketing, Discounts, and Apps. The main content area is titled 'Airmee / Data Synchronization' and features a large 'Airmee' logo. Below the logo are tabs for 'Airmee Settings', 'Account Settings' (which is selected), 'General Settings', 'Manual Sync', and 'Support'. The 'Account Settings' tab contains three input fields: 'API Id', 'API Secret', and 'Account'. The 'API Secret' field has a lock icon and a small 'x' icon, indicating it is a password field. The 'Account' dropdown menu is set to 'Unifaun Online'. A purple 'Save' button is located below the fields. Two blue arrows point to the 'API Id' and 'API Secret' input fields. At the bottom of the form, there is a link for 'Unifaun Sign Up'.

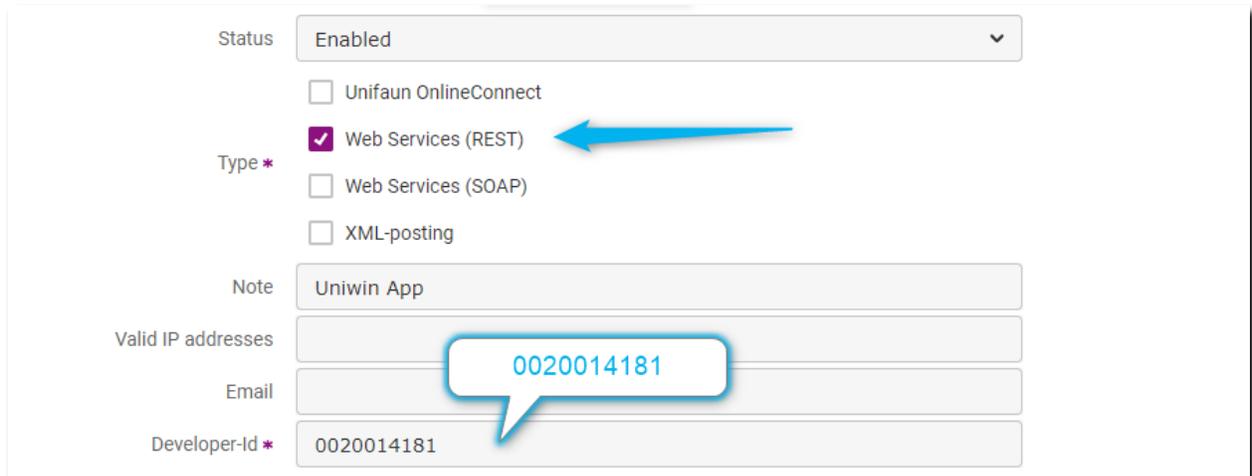

This document shows how to create an API ID and Secret ID in Unifaun Online dashboard. The key needs to be saved in your Airmee app for connecting your Shopify store with Unifaun Online account in order to sync shipping labels to Unifaun.

Login to your Unifaun Online dashboard and click into menu "Maintenance->Api keys. If you do not have the option called "API keys", then a required addon service called OrderConnect is not available on your Unifaun account, please contact us to get it enabled.

On the next page click on "New API Key" button.

The screenshot shows a configuration form for an API key. The 'Status' dropdown is set to 'Enabled'. Under 'Type *', 'Web Services (REST)' is selected with a checked checkbox, indicated by a blue arrow. Other options are 'Unifaun OnlineConnect', 'Web Services (SOAP)', and 'XML-posting'. The 'Note' field contains 'Uniwin App'. The 'Valid IP addresses' field is empty. The 'Email' field is empty. The 'Developer-Id *' field contains '0020014181', which is highlighted with a blue callout bubble.

Leave the status on **Enabled** and make sure that checked Type is **Web Services (REST)**.

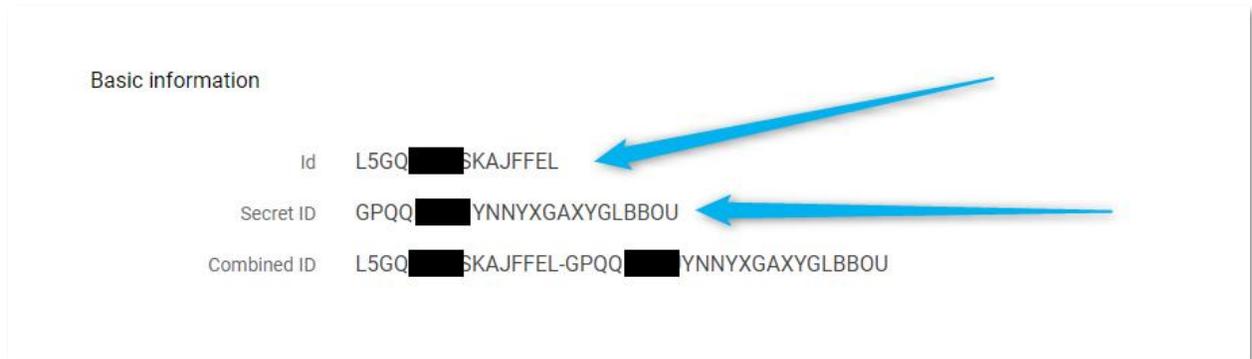

As you can create multiple API-keys, you can write a short note on this particular API-key and what it will be used for. Type for instance "Uniwin App" in this case.

IP-address restriction: you can leave it empty.

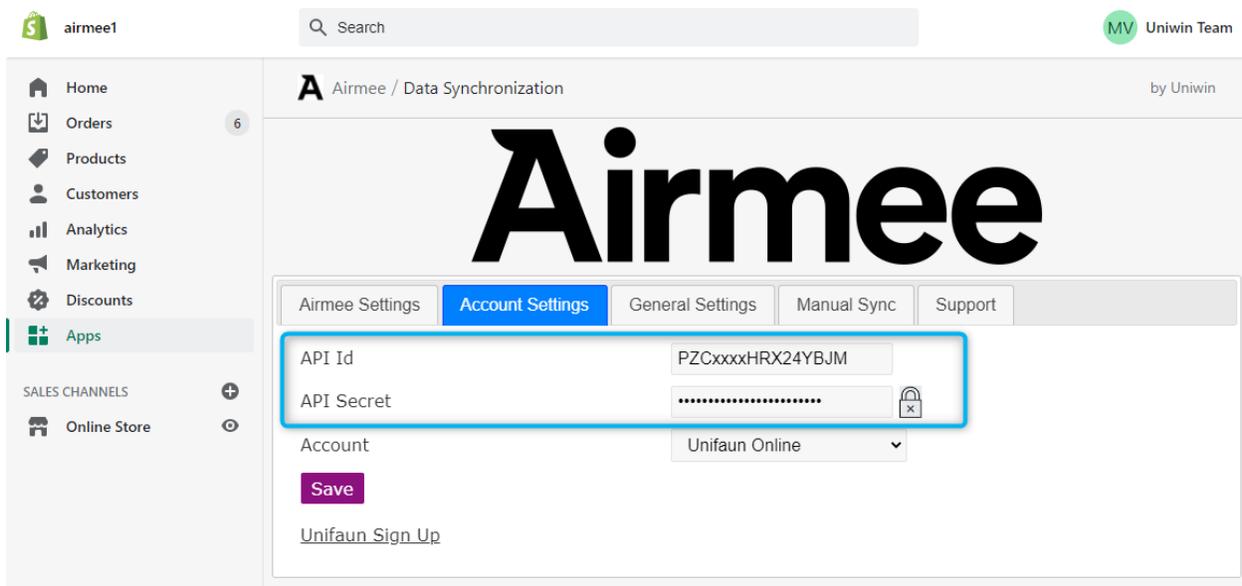

E-mail field: you can leave it empty.

Developer-ID: here you must use Uniwin's developer ID, it is **0020014181**

Finally click on "Finish" / "Save"

Once you click on Finish, the system will automatically generate the api key consisting of an api ID, secret ID and combined ID.

The values ID and secret ID must be saved inside the Airmee app, check screenshot.
