Airmee Home Delivery no time slot

If you want to show the "Airmee Home Delivery" option without providing option to select exact date, then the "Home Delivery with time slots" must be disabled, and the "Home Delivery no time slots" must be enabled.

Airmee account keys and mode

Airmee Settings | Account Settings | General Settings | Manual Sync | Support

Airmee Configurations

Home Delivery with time slots Disable Enable
Home Delivery no time slots Disable Enable
Price if delivery time slots are not enabled
Locale SE | FI | NO | ET
Limit Delivery Slots Default | Custom
Airmee JWT Token
Airmee Place ID
Mode

Airmee Options

ID Check No Yes
Age Check No Yes
Minimum age
Delivery without POD No Yes

Mode = Production

Fill in your "Airmee JWT Token" and "Airmee Place ID" for your Airmee account. You received it from Airmee.

If your Airmee account is provided to be used on real live Shopify store, then the "Mode" must remain on the default "Production". DO NOT select "Test" unless you are instructed to by Airmee or Uniwin.

Unifaun Account Settings:

The screenshot displays the 'Account Settings' tab for the 'Airmee' application. The 'API Id' field contains the value 'QEPXOTGOBODK2OJT'. The 'API Secret' field is masked with dots and has a lock icon. The 'Account' dropdown menu is set to 'Unifaun Online'. A callout box with red arrows pointing to the API Id and API Secret fields contains the text: 'Separate PDF guide for "Create Api Key in Unifaun" available on website. Leave empty if you do not want to sync label to Unifaun.' Below the fields is a purple 'Save' button and a link for 'Unifaun Sign Up'.

Follow the separate PDF instruction file to generate API id and API secret for Unifaun TMS. Leave this empty if you do not want to sync to Unifaun. This could be the case if you are using 3PL and they have their own app to retrieve your orders and send it to their own or other TMS system.
